

AUSTIN MAKASARE

Full-Stack Engineer

austinmakasare00@gmail.com | +91-7755910420 | linkedin.com/in/austin-makasare | github.com/AUSTIN0022 | austinmakasare.site

PROFESSIONAL SUMMARY

Full-Stack Engineer with 1.5+ years of experience building and operating production SaaS systems end-to-end across application architecture, cloud infrastructure, CI/CD, and deployment. Built real-time systems supporting 10,000+ concurrent users, event-driven processing, idempotent payment workflows, and auto-scaling AWS infrastructure.

TECHNICAL SKILLS

Languages: TypeScript, JavaScript (ES6+), SQL

Backend: Node.js, Express.js, REST APIs, Socket.IO

Data: PostgreSQL, Prisma ORM, Redis

Cloud & DevOps: AWS (EC2, ALB, Auto Scaling, ElastiCache, CloudWatch, SNS), Terraform, Docker, GitHub Actions

Distributed Systems: Redis Pub/Sub, BullMQ,

PROFESSIONAL EXPERIENCE

Software Engineer — YSM Infosolution, Nashik, India (Hybrid)

January 2025 – Present

- Architected a real-time examination platform supporting 10,000+ concurrent users across two major versions, using Socket.IO with a Redis Pub/Sub adapter for horizontal scaling and AWS Application Load Balancer sticky sessions.
- Reduced infrastructure costs by an estimated 70% by designing a dual-mode AWS/Terraform architecture – a ~\$37/month idle mode that auto-scales into a full load-balanced cluster within 10 minutes ahead of live contests.
- Built a multi-tenant SaaS platform with per-organization subscription management and a centralized operations dashboard, cutting payment/subscription issue investigation time from hours to minutes.
- Automated certificate generation and notifications for 10,000+ exam participants via BullMQ workers, and eliminated duplicate-charge risk with idempotent Razorpay webhook handling for all payment/payout workflows.
- Automated production deployments using GitHub Actions, Docker, and Amazon ECR/EC2 – cutting deployment time from ~30 minutes to under 5 minutes (~6x faster) – with CloudWatch/SNS alerting for proactive monitoring.

PROJECTS

Multi-Tenant Event Operations Platform – Client Product

Node.js, TypeScript, Express, React, PostgreSQL, Prisma, BullMQ, Razorpay

- Consolidated paper, Excel, Google Forms, and manual payment workflows into a production-ready multi-tenant event platform, delivered as a \$2K client engagement.
- Reduced manual reconciliation by 35% and organizer follow-up by 40% through automated participant deduplication, payment verification, reminders, and certificate distribution with BullMQ.
- Eliminated duplicate-charge incidents through idempotent Razorpay webhooks and built real-time analytics for responses, submissions, and payment status

PR Sentinel – AI-Powered GitHub PR Review Platform

Node.js, TypeScript, Express, Next.js, React, PostgreSQL, Prisma, BullMQ, Redis, Vercel AI SDK, OpenRouter,

- Automated PR analysis across 11 specialized agents by building an event-driven orchestration layer triggered by GitHub PRs, coordinating PR understanding, intent analysis, planning, parallel agent waves, reflection, and review generation.
- Enabled autonomous sub-agent analysis with 12 permission-scoped tools for diffs, files, commits, dependencies, repository history, issues, and CI through controlled tool calling and BullMQ/Redis orchestration.
- Reduced redundant GitHub API requests by up to 12× per review through commit-keyed caching and cross-commit finding resolution, while increasing test coverage from 7→68 tests and securing webhooks/tokens with HMAC and AES-256-GCM.

EDUCATION

MSc in Computer Science — KK Wagh Education Society, SPPU

2024 – 2026

CGPA - 8.91

BSc in Computer Science — KK Wagh Education Society, SPPU

2021 – 2024

CGPA - 8.0
